Pair our vitrified ceramic or glass items with our commercial inks for the **ULTIMATE COMMERCIAL DRINKWARE!**

## Commercial Ink Colors

Prop 65 Compliant Colors

Our Commercial Ink Hi-fire imprints are directly screened onto the item, then fired in at over 1100 degrees. This bonds the pigment of the imprint to the glaze of the item resulting in excellent imprint retention.

PMS colors are approximate. Bright Reds and Oranges are not possible without using Cadmium – this requires a signed waiver and a warning sticker on the item for Prop 65 compliance. Certain spot removing chemicals and dishwashing conditions may adversely affect the life of the imprint, contact us for more information.

Commercial ink may be used on many standard or vitrified ceramic items and selected glassware.

-- CONTACT US! --

All ceramic dinnerware will chip if mishandled. Vitrified dinnerware is more chip resistant than standard ceramic dinnerware. Get Next Column Pricing on orders printed on our vitrified ceramic and select glassware items printed with commercial ink. Glassware items included: G2237 (plain and halos), G5585, G5137, G5724, G5213, G5458, G4865, G4808, and G4803. New orders only. 72pc minimum. Not valid with any other offer.
